Do lobsters feel pain? Did Franz Kafka have a funny bone? What is John Updike's deal, anyway? And what happens when adult video starlets meet their fans in person? David Foster Wallace answers these questions and more in essays that are also enthralling narrative adventures. Whether covering the three-ring circus of John McCain's 2000 presidential race, plunging into the wars between dictionary writers, or confronting the World's Largest Lobster Cooker at the annual Maine Lobster Festival, Wallace projects a quality of thought that is uniquely his and a voice as powerful and distinct as any in American letters.

Two women uncover the truth in a rural murder investigation.

Animal Farm is a satirical allegorical novella by George Orwell, first published in England on 17 August 1945. The book tells the story of a group of farm animals who rebel against their human farmer, hoping to create a society where the animals can be equal, free, and happy. Ultimately, the rebellion is betrayed, and the farm ends up in a state as bad as it was before, under the dictatorship of a pig named Napoleon. According to Orwell, the fable reflects events leading up to the Russian Revolution of 1917 and then on into the Stalinist era of the Soviet Union. Orwell, a democratic socialist, was a critic of Joseph Stalin and hostile to Moscow-directed Stalinism, an attitude that was critically shaped by his experiences during the May Days conflicts between the POUM and Stalinist forces during the Spanish Civil War. The Soviet Union had become a totalitarian autocracy built upon a cult of personality while engaging in the practice of mass incarcerations and secret summary trials and executions. In a letter to Yvonne Davet, Orwell described Animal Farm as a satirical tale against Stalin ("un conte satirique contre Staline"), and in his essay "Why I Write" (1946), wrote that Animal Farm was the first book in which he tried, with full consciousness of what he was doing, "to fuse political purpose and artistic purpose into one whole". The original title was Animal Farm: A Fairy Story, but U.S. publishers dropped the subtitle when it was published in 1946, and only one of the translations during Orwell's lifetime kept it. Other titular variations include subtitles like "A Satire" and "A Contemporary Satire". Orwell suggested the title Union des r é publiques socialistes animales for the French translation, which abbreviates to URSA, the Latin word for "bear", a symbol of Russia. It also played on the French name of the Soviet Union, Union des r é publiques socialistes sovi é tiques.

How can we make sense of acts of cruelty towards animals?

Animal abuse by children is common, with 3-44% of children being reported to abuse animals at some point during their childhood. Much of this behaviour may be regarded as an extension of exploratory behaviour in a younger child; however, the apparent link between child and animal abuse is an area of increasing interest; with children who abuse animals being 2-3 times more likely to be directly abused themselves. How concerned should a health professional be that a child who abuses animals could themselves be the victim of abuse? We reviewed the literature on the subject, finding that abuse to an animal that is perpetrated by an older child (>10 years) is more likely to be associated with child abuse. Animal abuse is less common in girls compared with boys and there is some suggestion that child abuse may be more likely in these cases. Some papers have reported a higher prevalence of animal abuse in children with attention deficit hyperactivity disorder, developmental delay and conduct disorder, but the relationship with child abuse in these cases is unknown. Information on both child and animal abuse needs to be shared between the veterinary, medical and social care teams in order to protect both children and animals who are vulnerable.

Animal cruelty is linked directly or indirectly with every type of violent crime, and, what is not as well known, also with most nonviolent crime. Human beings would benefit enormously if fighting animal cruelty (investigating, prosecuting) were taken seriously. Many human lives would be saved and much human suffering would be prevented. Violent individuals are "made" and not born. Children are born with a love of animals, but the home environment plays a major role in determining a child's prosocial or antisocial personality and behavior. Child abuse, neglect, abandonment, and witnessing domestic violence are major factors in creating violent individuals, along with poverty, alcoholism, and toxic neighborhoods.

AAP Prose Award Finalist 2018/19 Management of Animal Care and Use Programs in Research, Education, and Testing, Second Edition is the extensively expanded revision of the popular Management of Laboratory Animal Care and Use Programs book published earlier this century. Following in the footsteps of the first edition, this revision serves as a first line management resource, providing for strong advocacy for advancing quality animal welfare and science worldwide, and continues as a valuable seminal reference for those engaged in all types of programs involving animal care and use. The new edition has more than doubled the number of chapters in the original volume to present a more comprehensive overview of the current breadth and depth of the field with applicability to an international audience. Readers are provided with the latest information and resource and reference material from authors who are noted experts in their field. The book: - Emphasizes the importance of developing a collaborative culture of care within an animal care and use program and provides information about how

behavioral management through animal training can play an integral role in a veterinary health program - Provides a new section on Environment and Housing, containing chapters that focus on management considerations of housing and enrichment delineated by species - Expands coverage of regulatory oversight and compliance, assessment, and assurance issues and processes, including a greater discussion of globalization and harmonizing cultural and regulatory issues - Includes more in-depth treatment throughout the book of critical topics in program management, physical plant, animal health, and husbandry. Biomedical research using animals requires administrators and managers who are knowledgeable and highly skilled. They must adapt to the complexity of rapidly-changing technologies, balance research goals with a thorough understanding of regulatory requirements and guidelines, and know how to work with a multi-generational, multi-cultural workforce. This book is the ideal resource for these professionals. It also serves as an indispensable resource text for certification exams and credentialing boards for a multitude of professional societies Co-publishers on the second edition are: ACLAM (American College of Laboratory Animal Medicine); ECLAM (European College of Laboratory Animal Medicine); IACLAM (International Colleges of Laboratory Animal Medicine); JCLAM (Japanese College of Laboratory Animal Medicine); KCLAM (Korean College of Laboratory Animal Medicine); CALAS (Canadian Association of Laboratory Animal Medicine); LAMA (Laboratory Animal Management Association); and IAT (Institute of Animal Technology).

Issues in Green Criminology: confronting harms against environments, humanity and other animals aims to provide, if not a manifesto, then at least a significant resource for thinking about green criminology, a rapidly developing field. It offers a set of specially written introductions and a variety of current and new directions, wide-ranging in scope and international in terms of coverage and contributors. It provides focused discussions of current and cutting edge issues that will influence the emergence of a coherent perspective on green issues. The contributors are drawn from the leading thinkers in the field. The twelve chapters of the book explore the myriad ways in which governments, transnational corporations, military apparatuses and ordinary people going about their everyday lives routinely harm environments, other animals and humanity. The book will be essential reading not only for students taking courses in colleges and universities but also for activists in the environmental and animal rights movements. Its concern is with an ever-expanding agenda – the whys, the hows and the whens of the generation and control of the many aspects of harm to environments, ecological systems and all species of animals, including humans. These harms include, but are not limited to, exploitation, modes of discrimination and disempowerment, degradation, abuse, exclusion, pain, injury, loss and suffering. Straddling and intersecting these many forms of harm are key concepts for a green criminology such as gender inequalities, racism, dominionism and speciesism, classism, the north/south divide, the accountability of science, and the ethics of global capitalist expansion. Green criminology has the potential to provide not only a different way of examining and making sense of various forms of crime and control responses (some well known, others less so) but can also make explicable much wider connections that are not generally well understood. As all societies face up to the need to confront harms against environments, other animals and humanity, criminology will have a major role to play. This book will be an essential part of this process.

Practitioners in the animal welfare field, law enforcement circles, and social services arena have often maintained that childhood cruelty to animals is a forerunner to violence against people. Does this behavior serve as a red flag with respect to extremely violent offenders, such as serial killers? Is it part of the cycle of violence associated with domestic abuse? Perez and Heide provide the first scientific examination of this relationship and examine issues of cruelty across different types of animals (pet, wild, stray, farm). The authors evaluate both qualitative and quantitative data to identify correlations between childhood cruelty and adult violent behavior, utilizing interviews and criminal records of violent and nonviolent inmates in a maximum security prison. Their findings will be of importance to a diverse audience, including researchers and practitioners in the field of juvenile justice, violence and domestic abuse, social welfare, animal welfare and animal rights and developmental psychologists and counselors, as well as law enforcement officers, district attorneys and judges, county and municipal officials, animal control officers, veterinarians, and school administrators, especially those concerned with intervention and prevention strategies.

Argues that the way humans treat animals results from the contradiction between the ideas that animals have some rights, but that they are also property, and offers ways to resolve the conflict.
