Introduction: Speech therapy treatment could be considered a new therapy for snoring and obstructive sleep apnea patients because of its direct action on oral motility. The myofunctional therapy includes the correct use of the stomatognathic structures and functions by means of functional exercises (respiratory, suction, swallowing and chewing) and muscular exercises with the aim of increasing the tonus and mobility of oral and cervical structures, which can be damaged in apneic patients.

~~Oral Myofunctional Therapy Applied on Two Cases of Severe...~~

Myofunctional orofacial therapy treats a variety of oral and facial (orofacial) muscle (myo-) postural and functional disorders and habitual patterns. An individualized regimen of exercises are used to correct tongue and lip resting postures as well as developing correct chewing and swallowing patterns through increasing awareness to the muscles in the mouth and face.
