Patterns within written text are not the same across all authors or languages. This allows linguists to study the language of origin or potential authorship of texts where these characteristics are not directly known such as the Federalist Papers of the ...

Text Analysis in Python 3 - GeeksforGeeks

In the text analysis, it is often a good practice to filter out some stop words, which are the most common words but do not have significant contextual meaning in a sentence (e.g., "a", "the", "and", "but", and so on). nltk provides us a list of such stopwords. We can also add customized stopwords to the list.

Next step in our Python text analysis: explore article diversity. We'll use the number of unique words in each article as a start. To calculate that value, we need to create a set out of the words in the article, rather than a list. We can think of a set as being a bit like a list, but a set will omit duplicate entries.
