This revision of Introductory Digital Image Processing: A Remote Sensing Perspective continues to focus on digital image processing of aircraft- and satellite-derived, remotely sensed data for Earth resource management applications. Extensively illustrated, it explains how to extract biophysical information from remote sensor data for almost all multidisciplinary land-based environmental projects.

1. Introduction to image processing. Image processing is a method to perform some operations on an image, in order to get an enhanced image or to extract some useful information from it. It is a type of signal processing in which input is an image and output may be image or characteristics/features associated with that image.

Digital Image Processing is a software which is used in image
processing. For example: computer graphics, signals, photography,
camera mechanism, pixels, etc. Digital Image Processing provides a
platform to perform various operations like image enhancing,
processing of analog and digital signals, image signals, voice
signals etc. It provides images in different formats. Digital Image
Processing allows users the following tasks
